

EPT

Energy Potential Technology

An innovative technological platform, able to maximize the active ingredients of natural substances and thus allow a biologically correct interaction with surprising results. EPT technology is a process that guarantee a natural, non-chemical and ecologically sustainable action as it is able to enhance existing substances in nature. It represents significant progress in the food, agricultural, livestock and industrial chemical industries, including the organic product segment and waste disposal. The use of EPT technology can replace the use of many chemical agents and toxic substances, guaranteeing safety and quality, increasing production and respecting the environments.

PHENOM
ND-METHOD

ND-Method is based on trace elements capable of improving the quality of flour for the production of all types of pasta and non-fermented products. Its natural characteristics are enhanced through EPT technology.

DESTINATION

Pasta and unfermented products

FEATURES

ND-Method is specifically developed for flours intended to NON-fermented products. Its formula based on trace elements has the ability to reinforce gluten of any quality of flour.

ND-Method improves the quality of pasta, reduces acidity, increases the storage period even in conditions of high temperatures. It also improves the gluten of flours that are not very resistant.

RECOMMENDED PROTOCOL

It can be added during the production process with the other ingredients or previously with flour. From 100 to 300 grams per 100Kg of flour.

COMPOSITION

Calcium-based trace elements enhanced with EPT technology

PRODUCT FEATURES

Consistency: White powder

Odor: Neutral

Packaging: 5-10 Kg. And Big-Bag 600 Kg.

Shelf life: 2 years

Our products leave no residue and respect crops, livestock and the environment

ABOUT

We are an Italian company which deals with innovative biotechnologies in agriculture, livestock, food and environment. We work closely with a team of scientists and researchers, whose work focuses on the development of biotechnologies capable of boosting a healthy and safe production, reduce energy consumption in full respect of the environment.
